William F. Schleicher, M.S., M.D.

Dr. Schleicher is a plastic and reconstructive surgeon with additional training in cosmetic surgery. He completed his undergraduate studies at the Virginia Polytechnic Institute and State University in Blacksburg, Virginia and received his Master of Science degree in Physiology from the Virginia Commonwealth University Health System where he also completed his internship and residency training in plastic and reconstructive surgery. Dr. Schleicher completed his Fellowship in Aesthetic surgery at the Cleveland Clinic in Cleveland, Ohio. Joining Dr. Schleicher’s expertise in reconstructive and aesthetic plastic surgery with Dr. Rausch’s expertise in Mohs skin cancer care and reconstruction represents a dual-specialty practice model. With a focus on optimizing the patient experience, our physicians provide comprehensive skin cancer care and aesthetic and reconstructive surgery in one convenient location. Dr. Schleicher will also offer a full line of cosmetic plastic surgery of the face, breast and body.

Dr. Schleicher is licensed in the Commonwealth of Virginia, board certified by the American Board of Plastic Surgery, and an active member of the American Society of Plastic Surgeons. Dr. Schleicher is committed to using his surgical expertise to provide patients superior cosmetic results during Mohs surgery closures and the reconstruction process.

Facility & Staff

Our facility is specifically designed for the treatment of skin cancer. The Skin Surgery Center of Virginia conforms to and is approved by the State of Virginia, Medicare and Joint Commission standards in design, policies and procedures, fire protection, safety and handicap accessibility. These standards are considered to be the highest and ensure the safest surgical environment, while performing surgery in a comfortable, cost-effective, outpatient setting. Our procedure and exam rooms have state-of-the-art lighting for better detection of skin cancer and visualization of the cancer's outer margins.

We take great pride in our staff's training and capabilities. The team consists of the physicians, nurse practitioners, registered nurses, licensed practical nurses, medical assistants and patient care coordinators.

Insurance & Referrals

We participate with most insurance plans and will submit all claims to your insurance company. Fees for expenses not covered (cosmetic procedures, co-pays, deductibles, co-insurance, some office visits) will be collected at time of service. We accept cash, check or credit cards.

Please check with your insurance company before surgery about pre-authorization, out of pocket expenses or if a referral is required. Please give them the correct code information for your referral. You are having Mohs surgery (procedure code 17311) for skin cancer (diagnosis code C44.90). Your surgery is an outpatient procedure performed in our Ambulatory Surgery Center. You/your insurance company could receive up to three separate bills from the physician(s) and the Ambulatory Surgery Center when utilized.

Our goal is to provide care to patients, regardless of financial status. If you have difficulties paying your bill or need help understanding your bill, please contact our office at 804.282.4940 and press 2 for billing.

Christine S. Rausch, M.D.

Dr. Rausch is a specialist in skin cancer, Mohs micrographic surgery and reconstructive surgery. She graduated Summa Cum Laude and Phi Beta Kappa from the University of Richmond. Dr. Rausch received her Doctor of Medicine degree from Eastern Virginia Medical School where she graduated as one of the top students in her class and was elected to the Alpha Omega Alpha Medical Honor Society early in her junior year. She received her Internal Medicine and Dermatology training at the University of Pittsburgh Medical Center. Following her residency, Dr. Rausch completed her fellowship training in Mohs Micrographic Surgery at Geisinger Medical Center. She is a Mohs College graduate, having completed the extra one-year fellowship training program in skin cancer surgery, pathology and advanced reconstructive surgery.

Dr. Rausch possesses the skills and experience necessary to perform Mohs micrographic surgery and reconstruction at all levels of complexity. Dr. Rausch is a licensed physician in the Commonwealth of Virginia and an Assistant Clinical Professor in the Department of Dermatology at Virginia Commonwealth University School of Medicine. She is board certified by the American Board of Dermatology, an active member of the American Academy of Dermatology and a fellow of the American College of Mohs Micrographic Surgery and Cutaneous Oncology.

Dr. Rausch is strongly committed to patient care and the treatment of skin cancer with a focus on achieving superior cosmetic outcomes.
Mohs Micrographic Surgery

What is Mohs surgery? Mohs micrographic surgery is a safe and highly effective technique whereby skin cancers are removed under complete microscopic control. In Mohs surgery, a layer of skin is removed around the visible cancer. Detailed maps are then drawn of the area, and 100% of the tissue margin is examined under the microscope to be sure all of the cancer and its roots are gone. If any cancer remains, that exact area of involvement is sampled, and the entire process is repeated until the cancer is totally eradicated.

Why do I need Mohs surgery when it seems the biopsy removed all the cancer? Cancers grow on top of skin but also have roots deep within the skin. A biopsy only samples the top portion of the cancer. If the roots are not removed, the cancer will continue to grow.

What are the advantages of Mohs surgery? By using the mapping technique and complete microscopic control, the Mohs surgeon can pinpoint areas involved with cancer that are otherwise invisible to the naked eye. Therefore, even the smallest microscopic roots of a cancer can be removed. Benefits include the ability to save as much normal skin as possible and the highest possibility for curing the cancer. In contrast, standard surgery techniques leave a small percentage of the margins, providing only an estimate of whether the margins are clear.

Preparing for Your Surgery

Pre-operative Consultations are done the day of surgery but can be arranged prior to surgery if desired. If you’re uncertain about surgery because you are considering another form of treatment or no treatment at all, please call before your scheduled surgery date to avoid a cancellation fee.

Biopsy Site Identification: Smaller cancers are difficult to identify. You must be able to identify your biopsy site the day of surgery. It’s helpful to take a photo of your biopsy site before it heals. Bring the photo with you the day of surgery or email it to info@mohsvirginia.com (photos you send may not be encrypted).

Food and Drink: Since surgery is performed under local anesthesia, you may eat and drink that day. We recommend bringing a lunch with you. Our coffee bar has a refrigerator and microwave available. You’ll be asked to remain in the office during the procedure, but your companion can visit one of the eateries located near our office and bring you back food.

Alcohol promotes bleeding. We ask you to avoid alcoholic beverages 48 hours before after surgery.

Smoking can affect healing by diminishing blood supply at the surgery site. Discontinue smoking 2 days before surgery and for 1 week after surgery. If you can’t discontinue entirely, cut back to less than 1 pack per day.

Transportation: Make arrangements for someone to drive you the day of surgery. Patients given medicine to relieve anxiety will not be allowed to drive themselves home.

Attire: Wear comfortable, older clothes, avoid make-up, perfume and jewelry. If surgery is on an area covered by clothing, wear something easy to remove.

Passing Time: Bring reading material or your computer to occupy time while waiting for the microscope slides to be examined. Wireless internet access is available.

Cancellations: If you must cancel surgery, please cancel 48 business hours before your surgery date. Less than 48 business hours notice will result in a cancellation fee.

After Surgery

Please do not travel outside the area for 1 week so that any unforeseen post-operative events can be addressed in office. If you have any problems at home after surgery, please call our office. Verbal and written instructions for wound care will be given to you at the end of your day.

Will I have pain and bruising after surgery? The surgical site may be sore for several days. Ice packs and ibuprofen are usually adequate for relief. Bruising and swelling are common and may not peak until 48 hours after surgery. Do not plan surgery around an event where your physical appearance is important as you’ll be wearing a bandage for a week in most cases.

Will I be able to return to work or be able to drive? If you’re given medications during surgery, you will not be allowed to drive yourself home. Returning to work or driving will depend on the size and location of your cancer/abnormal lesion and your occupation. Please bring all FMLA paperwork with you the day of surgery. In most cases, time off work will not be granted after surgery. Specific restrictions will be discussed on the day of surgery. If you would like to discuss this prior to surgery so arrangements can be made ahead of time, a consult is required.

Will the surgery leave a scar? Activities, including exercise on healing skin, will be restricted until stitches are removed. The more activity you participate in, the more likely you may bleed from the surgery site.

Will the surgery leave a scar? Whenever surgery is performed, there will be a scar. Dr. Rausch and Dr. Schleicher are trained in advanced reconstruction and fine suturing techniques to optimize the cosmetic outcome.

Will I need to come back? Suture removal and wound evaluation are usually performed one week after reconstructive surgery, which will not be done until the pathologist determines that all the cancer is removed. In some cases, additional visits may be needed over the next several weeks to months. Periodic visits, at least once a year, to your referring physician are advisable to monitor for skin cancers or signs of recurrence.
