

After Care

Cryosurgical Wound Care

Check below for information on how to care for your post-operative wound following cryosurgery.

1. The treatment area will scab over. Sometimes a blister may develop during the first 24 hours.
2. Clean the area daily with soap and water.
3. The initial discomfort will improve during the following day.
4. Band-aids are not necessary but may be used for cosmetic purposes.

Please contact our office immediately at 804-282-4940 if there is any evidence of infection or increasing pain.
